

Code42 University

Code42 Architecture: Authority Server Configuration and Integration

Who Should Attend: System architects or system engineers with an on-premises authority server and storage

Course Length: 1 day

Prerequisites: Completion of Code42 Essentials: System Configuration for Administrators*

This course focuses on how to architect, roll out, modify and scale a hybrid or on-premises deployment. Using a combination of lecture and hands-on labs, attendees will learn how to install and perform the initial configuration of the Code42 server along with automation procedures.

Course Outline

- Initial installation and configuration of Code42 authority server
- Code42 software upgrades and maintenance
- Adding destinations
- Provisioning and managing storage
- Code42 server troubleshooting

*Requires intermediate-level experience with Code42
