

# Code42 University

## Code42 Essentials: System Configuration for Administrators

**Who Should Attend:** Administrators of Code42 enterprise deployments

**Course Length:** 3 days

**Prerequisites:** None

This course approaches the usage of Code42's software from both the end-user and administrator perspectives, introducing product core concepts such as end-user backup and restore as well as configuration and administration functionality via the console. The class will integrate a series of real-world scenarios to tie all concepts back to use cases that attendees can apply directly to their role.

## Course Outline

### As the User:

- Client installation, authentication and restore
- Device preference settings
- Accessing and managing backups from the web

### As the Admin:

- Admin console introduction
- Password resets
- Device restores
- Device backup policy management
- Organization management
- User lifecycle management
- LDAP, SSO and Radius
- Reporting
- Device replacement
- Legal hold
- Search and indexing
- Endpoint detection and security
- Client customization
- Client troubleshooting
